

SURINNO

SOLID SURFACING

ENVIRONMENTAL STATEMENT

Surinno Solid Surfacing (Pty) Limited and its Parent Company PG Bison Limited are committed to preservation of the environment and to fulfilling their roles as good citizens by providing safe, healthy and environmentally sound facilities, processes and products.

THE PRODUCT

Surinno Solid Surfacing is a renewable product that can easily be repaired, offering longevity far surpassing that of alternative surfacing materials. Due to the renewable nature of the product, it is also possible to remove and rework the product into new designs.

Surinno Solid Surfacing meets the Class IA ASTM E-84 requirements as a fire and smoke retardant and is self extinguishing, emitting water above 300°C.

Surinno Solid Surfacing is an inert material and is considered non-toxic. During fabrication, dust is generated and suitable safety equipment, such as dust masks and hand and eye protection, should be worn.

PROCESSES AND FACILITIES

RAW MATERIALS

Surinno Solid Surfacing is manufactured using 2/3 ATH (Aluminum Trihydrate) and 1/3 Acrylic Modified Polyester. Once the polymerisation process is completed, the material is chemically stable and safe for use in applications ranging from food preparation to external cladding.

MANUFACTURING PROCESSES

Surinno Solid Surfacing is manufactured according to the highest standards and complies with all South African health and safety as well as environmental regulations.

In order to minimize waste, all suitable substandard products and scrap material is recycled and reused as raw materials.

PACKAGING

Every effort is made to minimize the packaging requirements whilst ensuring that the product is sufficiently protected during transportation, handling and delivery phases.
